MAIN PROJECTS

E-commerce

November 2022 –
December 2022

A web application where you can make purchases online

- I built it using React.JS;
- Use React Router, Redux and asynchronous requests for the Front-end.

[Link](#)

Pokedex

November 2022 –
November 2022

A Web application to display all existing Pokémon in an API.

- Built in a week using React.js.
- Protected login routes have been implemented.

[Link](#)

Página de Turismo

March 2023 – April
2023

A web application to see the most popular events in the city,
where you can create a user to create posts, like other user posts and vote on events.

- This app was built with another person in a total of one month.
- Technologies such as Next.JS, TypeScript and Tailwind were used.
- Implements various calls to the BackEnd using APIs and asynchronous functions.
